

Release Notes frogOS • Version 1.7.10 • 14/06/2026

#ReleaseNotes #frogOS #frogTerminal #frogStation #frogDisplay

Note: Display, Station, and Terminal share the same firmware.

Overview

frogOS 1.7.10 is a maintenance release for frogblue IP devices – frogTerminal, frogStation, and frogDisplay – focusing on camera image handling, web-interface reliability, network configuration, and frogCloud connectivity.

Highlights

- **Camera & Image Handling**
 - Improved RAW/DNG image handling on frogTerminal
 - Corrected white-balance information in downloaded DNG images, preventing images from appearing with a green colour
 - Improved detection and handling of white-balance information in DNG files
 - Added download controls in the web interface for easier retrieval of camera and event images
- **Web Interface & Configuration**
 - Improved reliability when saving configuration changes that require a restart or page reload
 - Restored native browser checkbox behaviour for stricter browsers, including Safari
 - Improved validation of IP addresses and connection methods before settings can be saved
 - Added clear confirmation when configuration changes have been saved
 - Improved IPv6 handling during configuration
 - Improved guidance when using manually configured proxy/server settings
 - Fixed an interface error that could appear when download data is unavailable
- **frogCloud & Network Reliability**
 - Improved frogCloud gateway status handling
 - Corrected an issue where clearing retained cloud MQTT information could affect the displayed gateway connection status
 - General improvements to network and cloud configuration reliability

Reliability & Polish

- Improved consistency of configuration feedback in the browser interface
- Minor translation and interface refinements
- General stability improvements
