frogblue Home

frogblueHome is the intuitive app used for operating frogblue's Bluetooth®-based Smart Home & Building Systems. Whether it is used for lighting, blinds, heating, access or alarm systems, this app makes sure you have everything under control. Also from remote locations via the Internet, using WiFi. Always encrypted and secured. The Home app communicates with the frogblue components directly and without any detours. Together, the components establish a reliable Bluetooth® mesh network and do not need a central control unit. Users can then easily define or adjust scenarios using the frogblueHome app, without having to contact the experts again. The Home app is set up automatically from the Project app that was used by the installer to install the frogblue system. It immediately knows the rooms and names of the lights and doors. And with frogDisplay, you can also control the system when you're away from home.

Category	operating software
Article description	frogblueHome

Funktionen & Leistung	• Light control/lighting scenarios
	• Shade system control
	• Intercom system
	• Door opening function
	• Set up and configuration of scenarios

For explanations and support during initial operation, you can use the step by step instructions in our system manual. You can find the manual on our website under: Software Downloads.

The Bluetooth-version, as well as the implemented hardware and the operating system, have an impact on the Bluetooth connection of the used device (Smartphone, Tablet). Please understand that due to the vast number of devices and manufacturers, the full Bluetooth functionality cannot be ensured. If your device (Smartphone, Tablet) should be affected, our frogDisplay is able to connect with the frogblue system via WLAN.
